Design 2 is more interesting and would look good if the colours we sound sensitive

More vibrant

More colours

More engaging and fun design

Looks more visually apoealing. Really like the colour relationships and the soft looks.

Looks cleaner and more magical

It's much more engaging and pleasant to the eye

Slicker, more resemblant of an actual piano, less to distract when you're playing

Colour makes music more enjoyable

Is there anything that should be improved?

11 responses

The text for bpm seems slightly too big imo

N/A

nope

Make the letters and numbers slightly bigger

Nope

centralised logo maybe

Clarity around the buttons, is C4 a button or is it letting me know which key I pressed?

Could add in some subtle white patterns/overlay (whilst still remaining simplistic)

The instructions should be clear. You will be surprised by how many people will not even press the keys to try them

Any other comments?

I like it

Looks good, if possible make the letters a bit bigger, seems quite squished/small, as well as the punctuation symbols, very hard to read

It looks amazing and a lot of fun

Reminds me of proposal I saw once that allowed lots of phones with some keys to be put together to create a whole piano - it allows friends to play tunes together. lots of fun!
